

OSIRIS® Education

The Growcer Education unit is specifically configured to support the learning goals of youth exploring careers in agriculture, food security, and sustainability. Built with a unique learning space within the farm, students, with teacher supervision, can explore the day-to-day science of controlled environment agriculture while actively growing greens that can be sold, distributed, donated, or used directly in their institution's food services.

Curriculum also available.

PRODUCT FEATURES

- Left Side Grow Rack Removed to provide more room for teaching and learning in the farm
- 1536 planting sites, able to generate 5000 lbs of produce per year
- Same loss-resistant deep water culture technology as Osiris, with included autodoser leading to less labour time in the farm for operators, making it easier for educational institutions to manage
- Increased pest control via included air curtain
- Can include land-based curriculum
